

Analyzing the crisis

The economy is one of the main problems of today. Spain is one of the countries suffering a big crisis. We like our students get knowledge about how economics have been developed through the times

We propose students the following works:

1. Make a presentation in English on how economy were developed in Spain from Middle Ages till now.
2. Make a game in English to get a better knowledge about the economy from Middle Ages till today.
3. Make an analysis of the different economic crisis and how they were solved since Middle Ages till now. The students will do the work in both languages (English and Spanish) . We divide the class in five teams, each one is expert in each crisis stage. We make an interactive TV programme or radio programme. Each team introduces the theme and other students make questions and the expert team gives the answers.
4. Students evaluate the contents and the quality of the presentation and the programme through videocases.
